

## ECnet Partners GETT to e-Enable Polytool's Supply Chain Processes using RosettaNet

### Solution

ECnet-GETT RosettaNet eSCM

### Challenges

- To e-enable its supply chain process
- To achieve better control over its supply chain
- To reduce operational costs

### Results

- Improved speed of information between its suppliers
- Increased information accuracy
- Increased supply chain responsiveness and faster information exchange

Global Electronic Trade Technologies Sdn Bhd (GETT), a subsidiary of Penang Network Services, and ECnet, under the GETT RosettaNet E-Business Hub initiative.

Launched in June 2003, the GETT RosettaNet E-Business Hub is the result of a partnership between GETT and ECnet, a leading collaborative supply chain solutions provider in the region. GETT manages and operates the hosted RosettaNet eSCM application services co-jointly developed with ECnet to serve the needs of the Malaysian manufacturers, employing best-of-breed technology to assist businesses in rapidly integrating its business processes and automate the exchange of information with multiple business partners.

As subsidiaries of Kobay Technology Bhd, **Polytool Technologies Sdn Bhd (HEPM)** and **Polytool Integration Sdn Bhd** are involved in the manufacturing of super precision tooling parts and highly precision equipment for the past 17 years. The Kobay group on the whole is involved in the high precision engineering industry, which is a feeder industry to the semiconductor and consumer electronics sub-sectors of the electronics industry.

Though well-equipped with the latest state-of-the-art machinery, Polytool Technologies and Polytool Integration realized that to gain a greater competitive edge, it needs to e-enable its supply chain process to achieve better control of its supply chain and reduce operational costs. Hence, they decided to streamline their business processes with their trading partners.

### The Results

The benefits of using the ECnet-GETT solution are that with a common RosettaNet eSCM application being hosted in a central secure location, no heavy investments on hardware, software and technical resources are required, thus also making it highly cost effective and easily integrated. Once fully implemented, both Polytool Technologies and Polytool Integration are expected to enjoy greater information visibility, speed of information and accuracy while working with their suppliers. This would also improve the response time of their trading partners to orders and improve their overall efficiency.

### The Solution

With the main objective of being able to communicate with their trading partners easily via the Internet, both Polytool Technologies and Polytool Integration selected the ECnet-GETT RosettaNet eSCM application, offered by
